2017 CHI HACKS

MLH POWERED BY DELL | Windows
SEASON 17

The Windy City's Premier High School Hackathon

May 27th - May 28th at Blue 1647 Tech Innovation Center in Chicago

What is Chicago Hacks?

Chicago Hacks is the premier high school hackathon that looks to educate newer students on computer science while also helping the more advanced programmers excel. We look to encourage any students to come and grow their love for programming and create awesome projects. We strive to spread and educate students on computer science in the midwest region.

Why Should I Come?

A hackathon is a great way to build programming skills with challenging problems that will make you think. Our hackathon will allow you to widen your understanding of computer science, teach you new skills, introduce you to new technology, and much more. We also intend for our event to be very social, you will meet and possibly work with some fellow hackers at our event. This is an MLH sponsored hackathon, so challenge yourself to make something great and have a chance to win some amazing awards and prizes!

We will be providing food free of charge throughout the event thanks to our sponsors, and will also be giving all attendees a Chicago Hacks T-Shirt when you arrive at the event.

Interested? Learn more and apply on our website:
